

Market of State Treasury Bonds (October 2014)

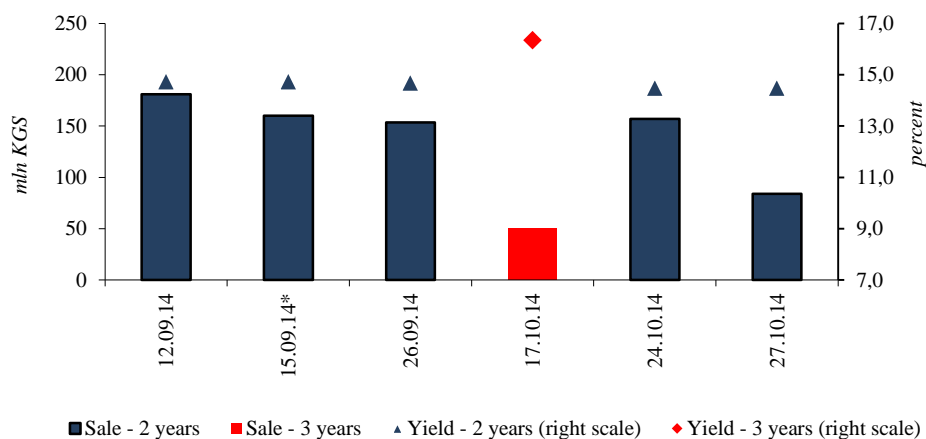

Graph 1. The dynamics of volume of supply and demand and yield of STB

In the reporting period, two auctions on placement of treasury bonds of the Ministry of Finance and one additional placement were held at the primary market. The total amount of the announced STBonds issue under the auctions held amounted to 257.0 million KGS by having decreased by 27.0 percent as compared to the previous month. The volume of demand amounted to 547.2 million KGS (-25.3 percent). In the reporting period, the Ministry of Finance kept on offering 2-year STBonds and it started to sell 3-year STBonds. At the same time, the sale of 2-year STBonds decreased by 41.2 percent, to 291.0 million KGS, which happened due to certain decrease of activity of commercial banks. The sale of 3-year STBonds amounted to 50.0 million KGS. Consequently, the level of filled demand fell by 7.8 percentage points and amounted to 37.8 percent.

The overall average monthly yield on all types of STBonds in the reporting period was formed at a rate of 14.9 percent, by having increased by 0.2 percentage points over the month due to sale of 3-year securities. The yield on 2-year securities in October amounted to 14.5 percent (-0.2 percentage points), on 3-year securities – 16.4 percent.

Graph 2. Dynamics of demand and sales volume and yield of STBonds

The volume of STBonds in circulation increased to 7.2 billion KGS (+0.3 percent). At the same time, the share of core shareholders - institutional investors decreased by 0.6 percentage point (to 53.3 percent). The share of commercial banks, on the other hand, increased by 0.6 percentage points and developed at a rate of 46.6 percent. The share of resident legal entities still remained at a level of 0.1 percent. Non-residents did not purchase securities in the period under review.

Over the month, the concentration index¹ of the primary market of STBonds was 0.32, which indicates to a high level of concentration and corresponds to the presence of the three investors with equal shares at the market.

In the reporting period, no transactions with STBonds were carried out at the secondary market.

¹ This index indicated to the degree of concentration of securities in the bank portfolio. The concentration index is calculated with the use of the Herfindahl-Hirschman method, by adding index share squares in the total volume. The index values vary from 0 to 1. Index value below 0.10 corresponds to the low value of concentration, from 0.10 to 0.18 – to the medium level; and above 0.18 – to the high level of concentration. For example, the concentration index of 0.50 is equivalent to the presence of 2 market players with equal shares; 0.30 – to the presence of 3 players, etc.
